

NoSwearPlz

Description

This is a bukkit plugin that will block any swear words from being said in chat. The current implementation uses a large list of words stored in words.txt that you can customize as needed. The plugin will also block any word that matches the pattern of a word in words.txt by 1 letter.

Example: “sh*t” will be banned and so would “shot”.

Therefore, there is also an exceptionWords.txt where you can add words that you want to be allowed, such a words that are marked as false positive, like th word “shot” from the example above. If a word appears in exceptionWords.txt it will take precedence over the words in words.txt.

Commands

– NoSwearPlz Commands –

- /nosearplz <word | bypass | exception> <add | remove > <words|players>
- /nsp word add [words] - Add words to the list of banned words
- /nsp word remove [words] - Remove words from the list of banned words
- /nsp bypass add [players] - Add players to the list of players that can bypass the filter
- /nsp bypass remove [players] - Remove players from the list of players that can bypass the filter
- /nsp exception add [words] - Add words to the list of exception words
- /nsp exception remove [words] - Remove words from the list of exception words
- /nsp reload - Reload the plugin configurations

– NoSwearPlz Report Commands –

- /noswearreport - Report a word as a false positive to a file called “words_players_think_should_be_exceptions.txt”
